

Solar hidden small on-site energy

Overview

They are energy efficiency, generation and storage technologies deployed at or near the point of use. Installing on-site renewable energy systems is a common strategy facility owners can use to save money, reduce their greenhouse gas emissions, and add resiliency to their facilities by generating their own electricity. For each kilowatt-hour (kWh) the onsite solar asset produces, a kWh of consumption will be offset for a buyer of renewable energy, or offtaker. It involves setting up renewable energy systems like solar panels, wind turbines, or small-scale hydroelectric generators to generate. Known as distributed generation or on-site power generation, this approach allows organizations to offset grid costs, manage peak demand, and gain greater energy independence.

Solar hidden small on-site energy

A Brief Overview Of Onsite Energy Systems

But what exactly is "distributed energy" or "onsite energy" and how does it fit into the broader energy landscape? Let's break it down by exploring the components and definitions of this ...
