

# Solar panels need lightning protection

## Overview

---

The short answer is: it depends on your location, system size, and local lightning activity—but most systems benefit from some level of protection. Lightning damage to solar installations is rare but catastrophic when it occurs. A single strike can destroy inverters, melt wiring, and damage solar. These damages reduce the efficiency of your panels, making it harder for them to convert sunlight into electricity. Like it or not, that is about the best you can do.

## Solar panels need lightning protection

---

### How to Shield Your Solar Power System from Lightning Strikes

Lightning strikes can wreak havoc on your solar power system. A single strike can cause cracks in solar panels, burnt-out circuits, or even melted connectors. These damages reduce the efficiency of your ...
