

# Solar photovoltaic panels power generation share

## Overview

---

Solar technology generated 5% of U. 1 Electricity demand peaks at different times than PV generation, creating energy surpluses and deficits. In our latest Short-Term Energy Outlook (STEO), we expect U. 6% in 2027, when it reaches an annual total of 4,423 BkWh. The. Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat water for domestic uses, to warm buildings, or heat fluids to drive electricity-generating turbines. Solar. Ember (2026); Energy Institute - Statistical Review of World Energy (2025) - with major processing by Our World in Data This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. Global solar photovoltaic capacity has grown from around 40 gigawatts in 2010 to approximately 2. It is one of the fastest-growing renewable energy technologies and is playing an increasingly important role in the global energy transformation.
