

# Solar power controller has no display

## Overview

---

A cracked display screen of the controller, LCD burnout, backlight, or button failure can happen after a long time. Perform a full reset or update the charge control software to check for. Your Solar Charge Controller is a small but important device. Without it, you wouldn't be able to make your solar power system run, or program your Load settings to your liking. If everything appears fine and the issue. Basically, occurrences, like reversed negative and positive poles, broken display lines, etc, are the common culprits behind this issue. We'll discuss them in the following sections along with the relevant solutions. The other possibility is that all four controllers were killed when you tried hooking them up this way. If the problem persists, contact the point of purchase (Victron dealer or distributor) for technical support.

### help pls re: controller won't show panels

I have the exact same duplicate system that works just fine. If voltages are good, maybe SCC doesn't work. Since you have a duplicate system, swap SCC to test.
