

Solar power generation accounts for total energy

Overview

Wind, nuclear, solar, and hydro together account for more than one-third of capacity. Solar continues to be the main fuel type for new additions, with over 30,000 MW of solar energy added in 2024, nearly double the amount added in 2023. Electricity generation by the U. In our latest Short-Term Energy Outlook (STEO), we expect U. 6% in 2027, when it reaches an annual total of 4,423 BkWh. Growth in utility-scale and distributed solar PV more than doubles, representing nearly 80% of worldwide renewable electricity capacity. Ember (2026); Energy Institute - Statistical Review of World Energy (2025) - with major processing by Our World in Data This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. The report also looks at retirements, planned retirements, and cancellations since 2017.

Solar power generation accounts for total energy

Share of electricity production from solar, 2025

About this data Share of electricity generated by solar power Measured as a percentage of total electricity produced in the country or region.
