

# Solar power generation panel red and blue warning lights

## Overview

---

For detailed information on how to interpret these lights, please view this guide from SolarEdge. ● Green (may appear more yellow) indicates production status ● Blue indicates connectivity ● Red indicates an errors or issues Please note: it is normal to not see any colored. Your inverter has a switch and three colored LEDs that indicate system information, such as errors or performance. Power Inverters are designed to convert direct current (DC) from a battery or a solar panel array to alternating current (AC) in AC-powered applications. Most power inverters are fitted with some visual and audible indicators to communicate the operational state of the inverter. Inverters typically. If your SolarEdge inverter isn't producing power or is flashing unusual alerts, the first clue is often in its lights or display. A SolarEdge green light blinking typically means the system is generating power, but when the green light disappears or a red light appears, you may see unfamiliar. Why does the red light on the solar inverter turn on?

The red light on a solar inverter indicates an issue that needs attention. ● Desktop version: <https://monitoring>.
