

Solar power satellite factory in Australia

Overview

Having tested its solar cell technology with spaceflights on Australian and international missions, Extraterrestrial Power is gearing up to manufacture solar cells for customers worldwide - and maybe one day build them in-situ on the Moon. Ground-based solar power and other sustainable energy options will play a key role in meeting the future energy demands of the Earth. Each of these current renewable options have limitations, in particular intermittency. That is, the sun does not always shine, the wind does not always blow, and. The Australian Renewable Energy Agency (ARENA) has today announced up to \$151 million in conditional funding under the Australian Government's \$1 billion Solar Sunshot Program (Solar Sunshot) for the establishment of a 500 MW per annum solar module manufacturing facility in the Hunter Valley, NSW. If you're interested in the Space market, also check out the top Satellite Imaging & Booming Market: Australia's space sector is worth about A\$8 billion annually, nearly double its value of A\$4-5 billion in 2018 Lukegosling Gov.

Home Energy Storage (Stackble system)

- 
High Efficiency
- 
Easy installation
- 
Safe and Reliable
- 
Perfect Compatibility

Product Introduction

-  Scalable from 10 kWh to 50 kWh
-  Self-Consumption Optimization
-  Integrated with inverter to avoid the compatibility problem
-  LFP battery, safest and long cycle life
-  Stackable design, effortless installation
-  Capable of High-Powered
-  Emergency Backup and Off-Grid Function

The new National Satellite Manufacturing Hub will be out of this world

The hub will be a global leader, bringing European satellite manufacturers into Australia and accelerating the upskilling of the regional NSW workforce while providing highly-skilled ...
