

Solar power station access port

Overview

Use the solar cable (or adapter) from panel output to the “Solar Input” or “DC In” port of the power station. With the rise of outdoor camping, RV travel, and portable power solutions, pairing solar panels with power stations has become the go-to setup for clean energy. ↗ However, different power stations use different solar input ports, and choosing the wrong one may cause compatibility issues. Your solar panel will have 2 leads, typically ending in MC4 connectors. An adapter cable converts, and extends. That approach works well, but it depends on having a purpose-built expansion port. This stands for multi-contact 4 millimeters. And they're amazingly easy to work with. If not, you'll likely need an adapter.
