

# Solar thermal energy mali

## Overview

---

The rural electrification agency says 32 mini-solar plants like the one in Karan are in four regions in Mali's south and southwest of the country, providing power for more than 2 million people, and are run by WeLight and German-owned Africa GreenTec. Mali has made a significant stride in renewable energy, launching its first hybrid solar microgrid in the rural town of Didiéni. With national electricity access hovering around 50% as of 2023, this project is a critical part of Mali's broader plan to electrify 300 rural communities using. A solar power plant in this rural corner of Mali has jolted a village to life and awakened dreams of steady power in other areas of this West African nation as it sees unprecedented growth in renewable energy. The border village of Karan and its 3,000 people used to go days without electricity. The national power access rate was 50% in 2019 (compared to 36. Due to rapidly growing demand, chronic underinvestment in grid infrastructure, heavily indebted public energy companies, and import disruptions. Plans to add over 500MW of solar PV capacity by 2028 would go some way towards balancing Mali's energy mix. Pricy and polluting liquid fuel-fired capacity remains by far the dominant source of generation, but funding from the World Bank Group and a new 200MWp solar project backed by Moscow would. In the Timbuktu region of northern Mali, MSF has just equipped the Niafouké hospital with a new solar panel installation. This energy transition strengthens the hospital's autonomy and ensures better continuity of care in an area that is both remote and affected by insecurity.
