

Swaziland s GW-scale solar energy

Overview

Photovoltaic (PV) solar cells are increasingly prominent sources of small-scale electricity production in Eswatini. With a mix of urban centers and widespread rural communities, solar energy offers scalable and decentralized solutions to expand power coverage. Licensed under the Creative Commons Attribution license (CC BY-SA 4.0). This is a solar resource map from Norway, the Netherlands, Sweden and Austria. This document also benefitted from valuable inputs, comments and feedback provided by Wim Jonker Klunne (Renewable Energy & Energy Access Expert); officials from Eswatini Energy Regulatory Authority (Embedded Generation (SSEG) market in Eswatini). This pledge signifies a crucial step toward Swazi energy independence, bridging the stark urban-rural economic divide and promising new community in Siteki, one can easily miss the Buckswood Solar Plant. This small pilot electricity generating plant consists of only 1,078 individual solar panels arranged in 11 rows, encompassed by a fence that makes the entire complex no bigger than half of a soccer field. However, in 2016, the nation consumed 1,084 GWh, indicating that it imported 961 GWh. Most of the imported generation comes from Eskom in South Africa, (the country's target for 2022).

Swaziland s GW-scale solar energy

A Brighter Future for Swaziland By Trent Scaccia and Tanele Magongo

frastructure, a 21.6 MW solar plant located at Ka-Langa in Siteki3. The Ka-Langa project will have a power generation capacity nearly 200 times greater than the Buckswood Solar Plant, an equivalent to a third of the ...
