

# Tallinn pumped hydro storage

## Overview

---

Zero Terrain (Energiasalv) Paldiski, the country's first pumped hydro energy storage system project, was initiated in 2009 between several energy companies to help the Estonian energy system cope with the unpredictable fluctuations of renewable energy, and enhance supply. Zero Terrain (Energiasalv) Paldiski, the country's first pumped hydro energy storage system project, was initiated in 2009 between several energy companies to help the Estonian energy system cope with the unpredictable fluctuations of renewable energy, and enhance supply. ☐☐☐☐ Estonia's first pumped hydro energy storage system, Zero Terrain Paldiski, is making waves with its unique design and ambitions to store enough power for all Estonian households. Supporting renewable energy with storage is essential, as it provides emissions-free energy, even when the wind is. Tallinn-based Zero Terrain has partnered with the Estonian government to develop Estonia's first pumped-hydro energy storage project, a key initiative in Estonia's renewable energy strategy. The tender is for constructing and designing a 500-megawatt underground pumped hydro energy storage plant in Paldiski. In May 2023, we launched our largest European battery-based energy storage project at the Antwerp platform in Belgium. With its 40 containers, the site will develop a capacity of 75 MWh, which is equivalent to the daily consumption of almost 100,000 households.
