

Testing the generator with a wind jackhammer

Overview

In this instructable you will be taught the simplest way to complete full testing of your generator for wind turbine installation. The generator I am using here is a 360 watts geared brushless permanent magnet generator 3- phase. Its a. A generator is a portable power source or an emergency backup power source that provides electricity when regular electrical supplies fail. Verify that a portable generator can. A generator is tested several times throughout its lifetime - after being manufactured, once installed onsite, during periodic maintenance checks, etc. Generator manufacturers, service / maintenance companies and those in the hydro power / wind power / mining / offshore industries use HAEFELY. Testing a generator for performance and reliability is not just about ticking a box for compliance. Next, perform a load test to ensure proper functionality.
