

The current status of photovoltaic and energy storage development

Overview

Solar and battery storage continue to set installation records, while wind energy has plateaued. 6 gigawatts (GW) of capacity, compared to 27. • The IEA reported Pakistan's rapid rise to fourth place in annual global PV deployment in 2024, with 17 GW dc installed. • At the end of 2024, global CSP capacity reached approximately 7 GW ac, with virtually all installed CSP capacity (three projects, totaling 250 MW ac) located in China. Key updates from the Fall 2024 Quarterly Solar Industry Update The International Renewable Energy Agency (IRENA) reports that, between 2010 and 2023, the global weighted average levelized cost of energy of concentrating solar power (CSP) fell from \$0. 12/kWh—a. Several challenges persist that are slowing deployment, including lack of sufficient grid capacity and large interconnection queues, permitting and siting challenges, high interest rates, and lingering supply chain issues. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory report. This amount represents an almost 30% increase from 2024 when 48. This was the second consecutive year of record-breaking capacity. Solar accounted for 66% of all new electricity-generating capacity added to the US grid in 2024, as the. For solar-plus-storage—the pairing of solar photovoltaic (PV) and energy storage technologies—NLR researchers study and quantify the economic and grid impacts of distributed and utility-scale systems.

The current status of photovoltaic and energy storage development

Quarterly Solar Industry Update

Each quarter, the National Renewable Energy Laboratory conducts the Quarterly Solar Industry Update, a presentation of technical trends within the solar industry.
