

# The photovoltaic controller is much larger than the panel

## Overview

---

The charge controller capacity should be greater than the solar panels to eliminate energy and capacity waste. They also prevent battery drainage by shutting down. The function of a charge controller is to do the following: MPPT charge controllers increase the current while PWM doesn't. For a PWM charge controller, this will be 50VDC. Before we dive into the potential issues, it's important to understand how to determine the appropriate size for your solar charge controller.

### What Happens if Your Solar Charge Controller is Too Small?

No matter how powerful your solar panels and batteries are, you won't get peak performance if the controller is too small. So let us dive deep into charge controller sizing and why it matters. If the ...
