

# The reserved space for energy storage cabinet to connect solar panels

## Overview

---

According to NFPA 855, individual energy storage system units should generally be separated by at least three feet, unless the manufacturer has conducted large-scale fire testing (part of UL 9540A) to prove a smaller distance is safe. This prevents a fault in one unit from spreading. Installing a battery energy storage system is a significant step toward energy independence. To ensure your system operates safely and efficiently, proper installation is paramount. Sometimes two is better than one.
