

The room has an uninterruptible power supply

Overview

An uninterruptible power supply (UPS) or uninterruptible power system is an electrical unit that provides power for computers, telecommunication equipment, etc. It not only offers emergency power backup but also protects the devices in use. But if you want to keep your home Wi-Fi network and some other key electronics up and running in the event of an outage, an uninterruptible power supply, or UPS, is worth the investment.

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitors, or flywheels. T...
