

The whole process of photovoltaic support construction in the pit

Overview

In solar projects, the base support system is like the foundation of a skyscraper - get it wrong, and your entire PV array might end up doing the wave during the next storm. Photovoltaic modules constitute the photovoltaic array of a. This is the construction of photovoltaic support foundations on hard rock strata. Water-cooled drills are used instead of impact drills to create regular, controllable cylindrical holes in the rock, facilitating subsequent grouting or steel pile anchoring. The first three are cas vely by Kulhawy (1985) and Trautmann &Kulhawy (1988). The foundation design takes into account factors such as soil bearing oundation" based on the principle of biomimicry.
