

US Solar Power Project

Overview

Explore the top US utility-scale solar projects of 2024-2025. Learn how gigawatt-scale farms and integrated battery storage are powering America's energy future. Hover over a planned solar project to view information on each project like their name, capacity and construction date. To get access to our full dataset of every clean energy project in the United States, sign up for. Concentrating solar power (CSP) projects in United States are listed below alphabetical by project name. From record-breaking solar farms switching online to multi-hundred-megawatt developments securing financing, this month underscored how utility-scale solar is leading the renewable. Solar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community solar arrays. In 2024, utility-scale solar power generated 219.8 terawatt-hours (TWh) in the United States. Total solar generation that year, including estimated small-scale photovoltaic generation, was 303.8 TWh. As of the end of 2024, the United States had 239 gigawatts (GW) of installed
