

Uninterrupted power supply for the project communication base station

Overview

UPS (uninterrupted power system): UPS system is a common choice of standby power supply for communication base stations, which can provide continuous power supply when the power grid is cut off to ensure the normal operation of communication equipment. The phrase “communication batteries” is often applied broadly, sometimes. Many remote areas lack access to traditional power grids, yet base stations require 24/7 uninterrupted power supply to maintain stable communication services. Without them, communication services would falter during power outages or fluctuations. 45V output meets RRU equipment.
