

Uninterruptible power supply can maintain time

Overview

For home use, a high-capacity UPS can last anywhere from 1 to 8 hours, depending on the number of devices and energy consumption. UPS units are rated by volt-amps and watts, which is a power limit and a rough estimate of how long the battery will last. A 350-VA unit costs about \$50 and should power a router for almost two. An Uninterruptible Power Supply (UPS) is an electrical apparatus designed to provide backup power to connected devices when the primary power source fails or experiences voltage fluctuations. It's not just for computers or servers—homes with essential devices like refrigerators or medical equipment can benefit too. Specifically, the larger the battery capacity, the longer the backup power time that the. Because an uninterruptible power supply (UPS) can represent a significant capital investment, it is important to have a general idea of how many years that investment will last.
