

Uninterruptible power supply requirements for fire lighting

Overview

NFPA 110 sets the standard for emergency and standby power systems, particularly those that supply power during outages. It covers installation, performance, testing, and maintenance requirements for systems that support life safety equipment—like exit signs and emergency lights. There are a few different options when it comes to choosing a reliable power supply, as well as some calculations that are necessary to ensure that the fire alarm system is provided with sufficient backup power.
