

# Use AC voltage regulator to change inverter

**51.2V 300AH**

## Overview

---

The objective of this circuit is to: 1. Sense AC supply and switch relay 'ON' when voltage is in between 180-250V. Relay should be turned 'ON' after 5 seconds. 3. This is to minimize. In the second concept below I have explained how to build a 10kva solar grid inverter changeover circuit which also includes a low battery protection feature. Circuit Objectives and Requirements I have a solar panel system with 24 Panels of 24V and. AC/AC converters are power electronic devices that change the uncontrolled alternating current (AC) RMS input voltage and frequency into a controlled AC RMS output voltage and frequency. How do I convert from one to another?

Should I use resistors or a regulator or something else?

I've heard of converters, transformers, regulators, inverters, step-down, step-up, buck, boost, switching, linear, and other terms. Buck-Boost (invert)—an output voltage that is generated opposite in polarity to the input.

## Use AC voltage regulator to change inverter
