

# What are the two types of photovoltaic bracket lower columns

## Overview

---

Egret Solar Photovoltaic installation brackets are mainly divided into two categories: fixed brackets and tracking brackets, and there are various specific types according to installation scenarios and requirements:.. Egret Solar Photovoltaic installation brackets are mainly divided into two categories: fixed brackets and tracking brackets, and there are various specific types according to installation scenarios and requirements:.. of foundations commonly utilized in large-scale P V plants. These types of foundations ordered from the lower to the higher cost-effective installation are : driven piles,earth-screws, helical piles and ballasted foundations. n this work,driven piles have been used. Cost footings,concrete. This type of mounting is the more used form of bracket in the early photovoltaic project. The bracket is set up with long and short legs before and after the bracket, and the legs are bolted to the foundation respectively, one end of the diagonal brace is supported at the foot of the long column. Classification by structure type: Single column bracket (L-shaped bracket): The photovoltaic module is fixed by a column perpendicular to the ground. It has a simple structure and is easy to install. Among them, fixed-type bracket includes roof-type bracket, ground type bracket, and water type bracket.

## What are the two types of photovoltaic bracket lower columns
