

# What are the types of light-transmitting photovoltaic panels

## Overview

---

The six main types of solar panels are polycrystalline, monocrystalline, thin-film, transparent, solar tiles, and perovskite. All of these are photovoltaic panels - meaning they use daylight to generate electricity - and they're all categorised based on their material. What kind of home do you live in?

When you're considering whether to get solar panels, it's a good idea to look into all the different types, to ensure you choose the best. Photovoltaic solar panels are devices specifically designed for the generation of clean energy from sunlight.
