

# What is the panel breakage rate of photovoltaic panel companies

## Overview

---

Industry studies show that about 0.5% of panels fail per year, meaning 1 in 200 to 1 in 2,000 panels stop working annually. That rate will vary depending on the climate where you live, but overall you. Solar panel failure rates are typically 0. Microcracks cause 80% of failures; electroluminescence testing detects them early. Proper installation cuts failure. For utility-scale solar developers, EPCs, asset managers, and financiers, the performance and durability of photovoltaic (PV) panels directly influence project bankability, return on investment (ROI), and long-term asset valuation. Solar panel degradation factors include extreme weather conditions, temperature fluctuations.
