

What is used to measure the resistance of a communication base station

Overview

For base stations the 3GPP specification TS 38. 141 covers transmitter and receiver characteristics of base stations as well as receiver performance under noise and fading conditions. To guarantee correct functioning and conformity to set standards, a variety of tests and. It is the role of the field technician to troubleshoot the cable and antenna system and ensure that the overall health of the communication system is performing as expected. Base stations and Remote Radio Units (RRU) are moving towards more integrated antenna/radio solutions, as well as. Measuring an antenna's performance when configured to a wireless device, or on its 1 own, can provide a wide range of benefits.
