

# What to do with broken old photovoltaic panels

12.8V6Ah

Nominal voltage (V):12.8  
Nominal capacity (ah):6  
Rated energy (WH):76.8  
Maximum charging voltage (V):14.6  
Maximum charging current (a):6  
Floating charge voltage (V):13.6~13.8  
Maximum continuous discharge current (a):10  
Maximum peak discharge current @10 seconds (a):20  
Maximum load power (W):100  
Discharge cut-off voltage (V):10.8  
Charging temperature (°C):0~+50  
Discharge temperature (°C): -20~+60  
Working humidity: <95% R.H (non condensing)  
Number of cycles (25 °C, 0.5c, 100%dod): >2000  
Cell combination mode: 32700-4s1p  
Terminal specification: T2 (6.3mm)  
Protection grade: IP65  
Overall dimension (mm):90\*70\*107mm  
Reference weight (kg):0.7  
Certification: un38.3/msds

## Overview

---

Broken solar panels can be recycled through a multi-step process, primarily involving collection, processing, and material recovery. Next comes processing, where panels are broken down into their constituent materials. But what to do when your solar panels receive damage varies depending on the nature of the problem. When it comes to solar, the pros outweigh the cons for the most part. Broken solar panels can result from various causes. Quick Answer: Broken solar panels can be dangerous because they may expose hazardous materials such as lead, cadmium, or other toxic substances found in some photovoltaic modules. Current recycling processes often require more resources and energy than manufacturing new panels.
