

Whether to install lightning protection for solar power generation

Overview

☐☐ Quick Answer: Ground-mounted systems and roof arrays in high-lightning areas (>25 strikes/km²/year) should have dedicated lightning protection. Small residential rooftop systems in low-risk areas often rely on proper grounding and surge protection devices (SPDs) as sufficient. When lightning damage does occur, it accounts for 32% of weather-related solar panel incidents, making proper protection a valuable investment in system longevity. Solar installations represent significant investments across residential, commercial, and utility-scale projects. A damaging surge can occur from lightning that strikes a long distance from the system or between clouds. In this article, you will learn how to protect your solar power. Solar PV systems are designed to collect energy from sunlight, but they also have large metallic components including panels, frames, and mounts, along with extensive electrical wiring. The intense heat from a strike can crack or even melt solar. At eSunScope Solar, we emphasise the importance of installing lightning arrestors to safeguard your Solar Panels and associated equipment from lightning-induced damage.

Whether to install lightning protection for solar power generation

How to protect your solar power system from lightning

In this article, you will learn how to protect your solar power system from lightning. Drawing from decades of installer experience, we'll explore the most cost-effective techniques generally accepted ...
