

Wind power blade cost

Overview

Blade price ranges by size category (assumptions: standard glass/ carbon fiber composites, single-piece or segmented blades, and normal production runs): Low \$120,000–\$170,000; Average \$180,000–\$260,000; High \$300,000–\$350,000 per blade. For a typical utility-scale blade, buyers should expect a per-blade price in the low-to-mid six figures, with total project costs reflecting multiple blades and related services. The figures below summarize total project ranges and per-unit ranges with reasonable assumptions about turbine size and. This report is available at no cost from the National Renewable Energy Laboratory (NREL) at www.nrel.gov/wind/analysis/blade_cost_model/. A Detailed Wind Turbine Blade Cost Model. Golden, CO: National Renewable Energy. But for operators, investors, and engineers, one critical question often arises: how much does a wind turbine blade cost?

The answer is not straightforward. Blade costs vary based on size, material, technology, and logistics. In this detailed guide, we'll explore the factors influencing blade. Wind turbines, particularly industrial ones, have heavy blades that can cost anywhere between \$500 and \$7, 500, with the average cost around \$2, 500. Wait, no—that's not entirely accurate.

Wind power blade cost
