

# Wind turbine blade transport seat

## Overview

---

The concept called Pack and Stack, can be used to transport virtually all LM Wind Power blade types – both by sea, barge and road. It makes handling less complicated and offers the best possible protection during transport. Wind turbines, sometimes called windmills, are available in various types and sizes, but they typically consist of three primary components: Tower: The tower section rests on a foundation and is between 50 and 100 meters above the ground or water. Nacelle: The nacelle contains a set of gears and a. Our Blade Logistics Solution leverages the global transportation activity, blade handling competency, fixture solutions, and in-plant shipment coordination to offer all-inclusive logistics packages to our customers. Our specialists design and develop flexible and modular transport solutions to support your entire value chain from your production. DSV is a global leader in transport and logistics for the renewable energy industry with two decades of experience working with the wind industry. Shipping oversized equipment like.
