

Zhuanglian Solar Power Generation

Overview

XINING, June 9 -- Amid China's green energy revolution, the world's largest solar photovoltaic power plant on the Qinghai-Xizang Plateau is forging a unique development path, simultaneously generating electricity while making exemplary contributions to poverty alleviation. XINING, June 9 -- Amid China's green energy revolution, the world's largest solar photovoltaic power plant on the Qinghai-Xizang Plateau is forging a unique development path, simultaneously generating electricity while making exemplary contributions to poverty alleviation. China is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. China has more. Last year, a viral drone video from China's Guizhou province revealed an entire mountain range blanketed in solar panels stretching to the horizon. [Photo by YAO FENG/FOR CHINA DAILY] A report by the International Energy Agency, or IEA, on the future of renewable energy production has pinpointed China, and in particular its solar power capabilities, as leading the way for the world. In an astonishing leap for the energy sector, China recently installed a record-breaking 93 gigawatts (GW) of solar capacity in just one month—May 2025.
